

Mirrabooka

The CasSQL product suite is a comprehensive solution to the problems clinics regularly face with needing to access immediate and up-to-date

# CasSQL

Take control of your clinical data!

CasSQL puts the power to easily access your clinic's stored data into your own hands.

CasSQL transparently plugs into your existing CAS installation. It allows your employees to use the power and flexibility of the ubiquitous Standard Query Language (SQL) to access, examine and extract information from your CAS system.

Test-drive CasSQL and unlock your clinic's data secrets today!

### Standards-compliant SQL

CasSQL implements SQL as defined by ISO and ANSI standards. This database querying language is the most widely known and used in the world, and can be learned very quickly.

### Export to Excel

CasSQL features a direct data transfer capability to open the results of a query immediately in Microsoft Excel. This allows employees to analyse results and create graphs or charts in a familiar application.

### Graphical Interface

CasSQL includes a complete, Windows-based application that can be used to create, execute and store queries in an uncomplicated and intuitive manner. Queries can easily be shared between multiple users, and both the query entry display and results display integrate seamlessly with your clinic's desktop environment, be it Windows 98, 2000 or XP.

### Batch Processing

A UNIX-based application included in the CasSQL suite can also be used to submit queries to the CAS database. It runs on the CAS server and can be set up to run automatically overnight, generating large reports that can be processed and printed by the next morning. Multiple queries can be run in one batch process, and their results output to the screen, a file or a printer.
