

Mirrabooka

CAS8 is Mirrabooka's primary health product. It is a complete clinic manager. Originally designed for radiotherapy, it is suitable for any large

## Clinic Administration System

Provides for patient appointments, records patient attendance and manages patient notes

Provides a full billing system including bulk-billing, HIC Online, invoicing, receipting, statements, outstanding debtors and reporting

CAS8 is Mirrabooka's flagship product from the health division. It is the upgrade to our original GUI, Cas2001. It is able to manage very large clinics and multiple sites. With CAS8 we have moved completely into the graphical user interface (GUI) environment. This has been achieved through the use of the latest technology Java™. Our Java™ based front end on the workstation provides full graphical windowing and functionality, while retaining a narrow bandwidth of data flow to and from the server. This guarantees a quick response (even over dial-up access), but most importantly allows multi-centred practices to share a single central server. Functionality extends from appointments, details of service, to a full debtors system. CAS8 can provide a complete paperless environment for patient notes.

### Features:

#### Clinic Reception

- Appointment all types
- Patient history/Clinic history
- Multiple providers
- HIC Online

#### Doctors

- Can view patients waiting
- Online notes & incoming reports

#### Accounting

- Details of service feed directly to invoices
- Receipts feed to banking slips
- Manage outstanding debtors

#### Clinical & Reporting

- Manage data for statistics

#### Typing

- Import to MS Word and Open Office
- Copy doctor addresses to letters & envelopes

#### Flexibility

- Customisations that can be turned on or off
- Add your own fields

#### Security

- Individuals don't have access to modules they don't need
- Journal of all data changes provides rollback or recovery

# CAS8— Description

View up to six weeks of bookings on the one screen

Setup your look/patient menu to be totally patient-centric

Display patients photo ID in the lower right hand corner

## Clinic Reception

### Appointment Setting

CAS8 provides the ultimate in patient appointments. View up to six weeks of bookings on the one screen.

Make or delete appointments, or choose other patients without ever leaving the appointment screen.

CAS8 is ideally suitable for Radiotherapy or Medical Oncology, where the patient needs to be given multiple appointments for a course of treatment.

Add comments for each appointment as necessary. Make any number of appointments at a time. Display treatment and doctors diaries together and make appointments for either.

### Menus & Lists

Menus in CAS8 are flexible. Users are given only the menu items that they need. In CAS8 we can use the mouse or keystrokes to navigate, so existing CAS users do

not need to change their practice of using the keyboard alone. With CAS8 you can setup your look/patient menu to be totally patient-centric. Thus after choosing your patient you can choose any menu option that is patient oriented such as appointments, receiving, invoicing, letters etc.

Lists in CAS8 are more extensive and flexible than with CAS. You can scroll up and down the lists with either the mouse or arrow keys.

### Form Displays

CAS8 forms exploit the full flexibility of GUI interface. Form displays are crisp. Non-editable fields are clearly greyed out.

The mouse can move you to any field quickly to make a change.

The patients photo ID can be displayed in the lower right hand corner for positive identification. The <help> or <F1> key will bring up a context sensitive window to provide you with immediate help on every field.

## CAS8 – Description

Doctors can view patients waiting

Import into Microsoft Word at the touch of a key

Documentation updated with every upgrade

Customise to suit your needs

### Doctors

Doctors and treatment staff can view patients waiting. Patient notes can be viewed online as can incoming letters, referrals, diagrams, pathology and radiology.

### Accounting

Details of service from reception or treatment areas feed directly into invoices, bulk-billing etc. Invoices can be done one at a time or as a batch job for a weekly mailout. Receipting feeds directly into banking. CAS8 can manage all HIC special requirements such as Capital Component reimbursement, equipment numbers and LSPN numbers. It can print account statements and manage bad debtors.

### Typing

#### Import Into MS Word

CAS8 can drastically improve writing letters to referring doctors by completing addresses and copies at the touch of a key. It can print its own

CAS8 is an approved HIC Online provider. You can make patient claims to Medicare as part of the receipting process, or when invoicing.

letters or import to MS Word or Open Office for a more professional look.

### On-line Documentation

Click on the book icon at any time and CAS8 will display the documentation window. It will also try to be context sensitive. No more do you need to find “the book” as it is always there. Not only that but it gets updated with every upgrade.

### Clinical & Reporting

CAS8 can manage your specific clinical data that would be required for Cancer Clinics etc. You can design your own data fields and

forms. There are several methods of data extraction as well as many standard reporting modules.

### Flexibility

CAS8 has several hundred customisation options that can be turned on or off according to your needs. Additionally, CAS8 has a powerful

query program to create modules specific to your needs and link them into your menus.

### Security

Menus are customisable for each user. Thus individuals don't have access to modules that they don't need. The underlying database also has access control down to the field level. We

can also force a user ID stamp on registration, patient notes and appointments. The underlying database journals all data changes to provide rollback and recovery.
